

MANUAL TRANSPALLET

CHARACTERISTICS

Our **TRANSPALLET** features reliability and solidness at competitive pricing.

Resistant and reliable one piece cast iron pump, worked with numerical control machine.

The Hydraulic pump is the core component of the hand pallet truck. The pump is designed and built in Italy with constant care and attention to details. This gives our pump the superior characteristics and features of:

- **MONOLITHIC DESIGN:** the one-piece cast iron housing, which protects inside all hydraulic components avoiding any accidental damage. Furthermore the pump housing is machined by CNC machines which ensure high precision tolerances.
- **CHROMED PISTON ROD & OIL SEAL:** to avoid rust and prevent oil leakage.
- **MAXIMUM PRESSURE (RELIEF) VALVE:** safety device that protects the pallet truck against overloads.
